

FULL SERVICE. NO HASSLES.

ATEK Access Technologies will be there every step of the way, ensuring seamless installation and integration with every tank and enterprise system. And ATEK will continue to provide full-time support with award-winning ATEK Service Platform (ASP). ASP continuously monitors the health of devices in the field, preventing dead batteries, missed reports and data over usage. ATEK service personnel are alerted if any of these areas need attention, and will contact and troubleshoot to eliminate problems. Keep the focus on tank levels knowing that ATEK Service Platform is monitoring the devices.

Battery Voltage

When the battery voltage drops below 4.5 volts, ASP will alert ATEK service personnel to notify that the battery needs to be changed. They will also alert if any other monitors are near the low voltage warning level so all of the batteries required can be purchased at once to save time. With ASP there's no need to worry about a dead battery causing downtime ever again.

Uptime

Last Reported	Unreported after (min)	Alerts	Verified
11-09-2015	1380	Yes	<input checked="" type="checkbox"/>

Uptime

TankScan monitors and gateways allow the flexibility to report tank levels as often as needed. But what happens if all the reports aren't getting through? ASP is watching over the system, looking for monitors that have not met the reporting interval configuration. ASP will prompt ATEK service personnel to fix any issues and ensure that data is getting received as expected.

Cellular Usage

ASP uses a predictive algorithm to alert ATEK service personnel if the cellular devices are using more data than they should, potentially causing the device to exceed its monthly allotment. Instead of getting hit with overage charges, ATEK service personnel will reach out and troubleshoot the issue.

Cellular Usage

Cellular Plan	VZW 5MB SG1	Cellular Data Allotment 5,000
Monthly Cellular Data Used (MB)	1.77	Cellular Data Indicator 
Cellular Data Run Rate	549.03%

Access the power of technology.

RELIABLE DATA. BETTER DECISIONS.

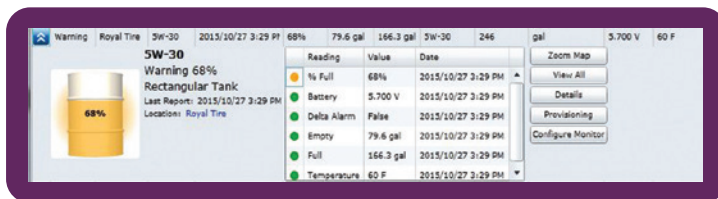

ATEK Intelligence Platform (AIP) is the window into the heart of tank operations. It enables organizations to make data-driven decisions based on current readings from liquid assets. With functions for configuring, organizing, reporting, alerting, and locating any point within the network of devices, AIP can unlock the efficiencies held captive by information shortages. AIP is always there; ready to help with instant access to any or all the asset data needed to drive accuracy into decision making.

Inventory Reporting

AIP provides monitoring, reporting, and alerting functions driven by data from assets. Minimal effort is required to see the whole operation or quickly sort to find the locations that require immediate attention. Current inventory levels can now be used to drive delivery decisions and truck routing for optimal resource utilization. Configurable and exportable reports are a few clicks away and give the ability to put the data to use quickly.

Tank History List 2015/10/27 4:43 PM

Name	Description	Location	Reading Date	% Full	Full Alert Level
SW-30	Motor Oil	Royal Tire	8/26/2015 7:21:02 PM	57	141.0 2

Event Alerting

For critical asset management, turn to AIP alerting functionality. Configurable alerts can be set for each device with up to three levels of significance. Multiple users can be alerted simultaneously or each depending on alert severity. Users outside the organization can be created to receive alerts to service the asset based on the criteria of choice. AIP has the data to help avoid downtime.

Location Mapping

AIP manages many details about assets including the type, contents, description, name, tag, and capacity and location. Location is a useful attribute when multiple sites are monitored. The map on the home screen allows one click location of each asset or site. Each location and asset type can be given a unique icon to quickly identify the device being viewed.
