Items needed:

- Laptop
- Digi[®] Device Discovery Utility
- Network Shared Key (password)

The Digi Device Discovery Utility can be downloaded via a Google search or directly from the Digi support page: http://www.digi.com/support/getasset?fn=40002265&tp=5.

Determine Gateway Location

Locate gateway near 115 VAC outlet that is close to TankScan monitor. It is okay to place gateway in a different room than TankScan monitor but limit the number of walls and distance between them. Metal walls will weaken signals significantly while other material types will also weaken signals but with less impact.

Microsoft Windows® OS

11	Select the Security Mode used on the wireless network from the drop down menu. Typical modes are WPA-PSK (Pre-shared key), WPA-EAP (Extensible Authentication Protocol), WEP (Wired Equivalent Privacy), and Open (unsecured). Then click " Apply ".	Wireless Network Selection
		Security Mode: WPA-PSK WPA Shared Key: Apply
12	Enter a network Shared Key (password), if required. There is no Shared Key for open networks. Then click " Apply ". The gateway will apply the network parameters. Network interruption may occur during this time, as well as a potential gateway reboot. NOTE: If the Shared Key (password) changes,	Wireless Network Selection Security Mode: WPA-PSK WPA Shared Key:
(12)	repeat steps 1 -11 to update with the new password. Wait for " Storage transaction complete "	

Wait for "Storage transaction complete" message to appear, power indicator to be solid green, XBee indicator to be blinking green, and network indicator to be solid green before moving to next step. Important: This may take a couple of minutes before gateway reaches this state of operation.

Wireless Network Selection

Storage transaction complete

The system is currently attempting to apply the requested parameters. Network interruption make occur during this time, as well as a potential device reboot. Examine the LEDs to determine whether the device successfully connects to the wireless network. As the address of the device may change when connected to a new network, it may be necessary to use discovery tools to find the device if further interaction is required.

Connect your laptop to your facility's wireless network that the gateway has now joined. 14

Open the Digi Device Discovery Utility and click on "Refresh view". Locate the device labeled ConnectPort X2e Wi-Fi ZB. Click once on the device and then click on the "Open web interface" under Device Tasks (double clicking the device will bring you to the web interface as well).
